Beloise Huffstutler

Information Security Associate @ Wells Fargo | Access Control, Risk
Management.
Harker Heights, Texas, United States

Summary

View my Skills on Mentra: https://app.mentra.com/beloise-huffstutler

I am an Information Security Associate at Wells Fargo, where I
collaborate with LOBs to request access for beneficiaries and work
with role and system owners to build out various roles. My work
involves Access Control and Identity and Access Management (IAM)
to safeguard the company's data and systems from unauthorized
access or misuse.

Before joining Wells Fargo, I was a Software Engineer at 100Devs,
a web development company that creates custom websites and
applications for clients. I also have 7 years of experience as a
Freelance System Administrator, running multiple servers, including
one that had a peak active user base of over 1K people. I am
proficient in Microsoft Office, Front-End Development, and Linux
System Administration, and I have a passion for learning new
technologies and skills. I am currently pursuing a Bachelor's degree
in Computer Science at Open Source Society University, an online
platform that offers free and open-source education. My goal is to
enhance my knowledge and expertise in the field of information
security and contribute to the protection and improvement of the
digital world.

Also I like raccoons.
